BID 7549995
VOC CANISTER CLEANING SYSTEM FOR 6 LITER CANISTERS
SPECIFICATIONS

The system will allow the simultaneous cleaning of up to 12 six-liter canisters, within an oven that heats the entire canister uniformly to temperatures in the 40-90 degree C range. The temperature of the oven will be programmable, with set points to coincide with stages of the cleaning cycle. The oven temperature will be under software control through a cleaning program, with the ability to vary the temperature according to where in the cleaning sequence a given step is.

The system will contain two pumps, one dual-diaphragm "rough" pump, and one molecular drag pump, capable of attaining pressures of about 10 milliTorr. It will also have an input port for humidified nitrogen or zero air, and the humidifier will be attached to the control unit. It will achieve cleaning through a programmable series of cycles in which the canisters are filled with the zero-air or nitrogen, and then evacuated, first by the rough pump, then by the molecular drag pump. The number of cycles will be programmable, as will be the duration of each step in a cycle. The controlling software will allow the duration of a step to be specified in terms of canister pressure, *or,* in terms of clock time (minutes, seconds, etc.)

The system will be driven by a dedicated computer, either internal or external to the body of the control unit. The system must be bid <u>with</u> the controlling computer.

The system must be able to accommodate canisters from the major canister vendors, including *SIS,* Rasmussen, Restek and Entech. Quarter-inch Swagelok fittings must be configured for easy connection of the canisters to the manifold in the oven.

Price on bid form must include all costs associated with furnishing and installing the system quoted. No additional costs will be accepted.
