Statement of Work for Auxiliary Structures Demolition Marine Ecosystems Research Laboratory (MERL)

Location:

MERL
Narragansett Bay Campus
University of Rhode Island
Graduate School of Oceanography
Narragansett, RI 02882

Project Overview:

As detailed in the attached CRMC Maintenance Assent, this project involves the decommissioning of the seawater research tanks east of the MERL Building. While the Assent approves the complete removal of these facilities, this decommissioning will occur in phases. The end product of this first phase, if all options are exercised, will leave the site clear of all structures EXCEPT the two tanks closest to MERL, the supporting piles and decking immediately surrounding those two tanks, and the two outbuildings closest to MERL.

Base Bid:

1. Remove the 12 tanks furthest east of the MERL building and all decking and supporting material external (outboard) of those tanks and the chain link fence.
2. Relocate the two cross bracing members connecting bents 6 and 7. Reattach these members to connect bents 3 and 4. Existing hardware can be reused if intact, else contractor shall replace hardware in kind. (See photo below)
3. Completely remove the dock's supporting piles for the outer 6 pile bents (bent numbers 5-10).
4. Additionally, remove the upper and lower decking, the control room under the lower dock, and all connected members and piping, including the beam for the overhead crane eastward of the fourth pile bent. Only the first four bents and connected dock westward of the fourth bent will remain.
5. Securely attach a pressure-treated wooden railing around all sides of the remaining original deck. This railing system will be terminated at each edge of the two remaining tanks in order to provide access to those tanks. (see Railing Detail below).

Alternate 1:

Complete the base bid and then remove the concrete foundation pads from under the 12 tanks removed in the base bid. Additionally, completely remove the control room foundation and the concrete foundation pads that had supported outbuildings 3 & 4.

Notes:

1. Contractor is responsible for following all requirements of the CRMC Assent.
2. Contractor is responsible to remove from the campus and properly reuse, recycle, and/or dispose of all materials associated with this demolition.

CRMC Maintenance Certification Request – MERL Tank Removal

Ms. Silvia,

As requested, a CRMC Maintenance Application and supporting documentation is attached for a proposed project at the URI Bay Campus in Narragansett. The project involves the removal of exterior fiberglass tanks and their support systems from the campus. These structures, built in 1978, are no longer in use and have significantly deteriorated. Due to the condition of the facility and its location within the velocity zone, URI desires to remove these tanks proactively to prevent damage to both Narragansett Bay and other coastal structures should the tanks become dislodged in a storm. The outbuildings, pile supports, and shallow concrete pads will also be removed during this project.

Access to the site will be from Pier Road, which follows a path between Narragansett Bay and the proposed access to the site. All materials will become property of the demolition contractor and will be removed from the campus. The temporary stockpiling of material prior to its removal will be upland from Pier Road and within the existing earthen berms to the north and south of the site. Erosion control measures, presumably silt fencing or straw bales will enclose the east side of the site between the berms. The access path shown on the drawing will be raised to an elevation if/as needed to prevent any disturbed soil from transporting to the water through that route.

Additionally, the University of Rhode Island is requesting a waiver of the application fee.

If you have any questions or need additional documentation, please do not hesitate to contact me directly at 401-874-6584 or djpalazzetti@mail.uri.edu.

Sincerely,
