- The inspection certificates shall contain other anti-counterfeit security features known only to authorized personnel, which will make counterfeiting extremely difficult.
- There shall also be incorporated in each certificate a security feature which will result in the mutilation of sticker if an attempt is made to illegally transfer the decal from one windshield to another. The insert numbers shall be printed in black with a series of spaces throughout the number.

The twelve calendar months shall be printed alongside the individual numbers correlating (for example: the month of August with the number 8 and the month of July with the number 7) and so on through the 12 calendar months.

This information must be printed in a backwards manner so that when the insert is applied to the inspection sticker, the visible number and monthly indication will appear in a normal manner.

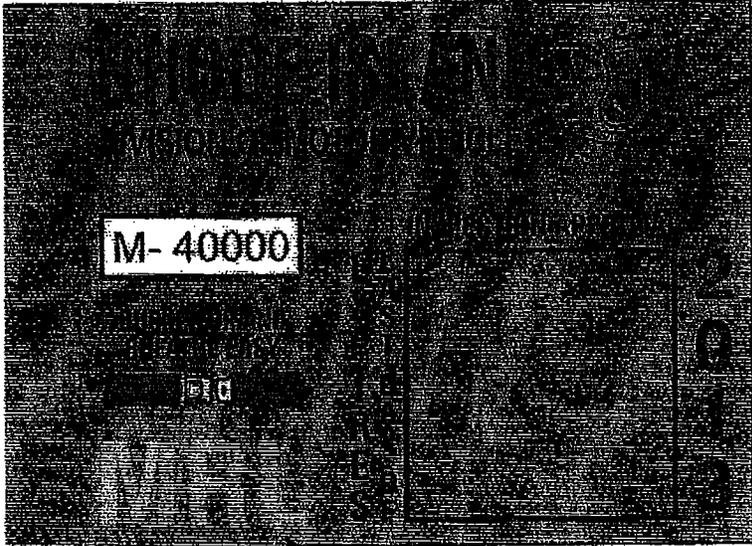

The numbers shall be printed on a clear Mylar material with adhesive on one side so that when the number is affixed to the inspection sticker, it becomes a complete product and the adhesive surface is exposed for contact on the windshield of motor vehicle.

The adhesive surface must have some protective covering so that they will not stick to each other, but yet are easily removed so that the individual numbers may be affixed to the sticker normally one at a time without the use of any tools.

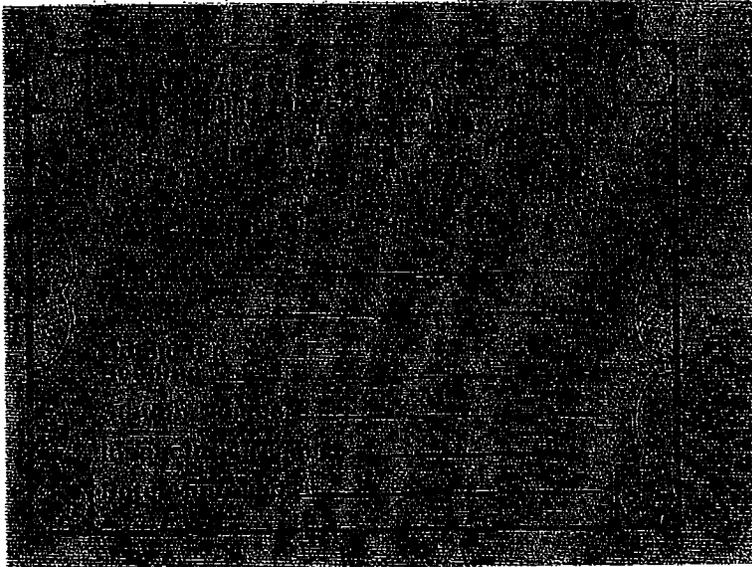

The insert numbers shall be printed in strips of 5 numbers to each strip and packaged in individual groupings separating the 12 different numbers.

The vendor must assure inside delivery to the Motor Vehicle Safety and Emission Control Division, 325 Melrose Street, Providence, RI 02907.

The following samples are for design and layout only. Size, color, numbering, expiration etc., are to be per the above specifications.
