**BID SPECIFICATIONS 7461247-ADDENDUM 2  
CHARLESTOWN BREACHWAY ROCK REMOVAL  
SCOPE OF WORK**

**Line 1**

Mobilization / Demobilization includes all setup, transportation tug boat operations rigging and any other operations necessary to occupy the site and remove or lower the rocks from the 60 foot wide channel to a depth of -4' MLLW. This work also includes performing a multibeam survey that will be utilized for both for the contractor to plan and execute the work but also to provide payment quantities. The survey volumes both pre and post shall be stamped by a Rhode Island registered Professional Engineer. A benchmark will be provided to the Contractor as shown on the plans. The entire area outlined as "work area" (station 0+00 through 4+75) shall be surveyed and quantified as part of this item. The contractor shall provide a plan that shows the area after all rocks have been removed with a 60 foot wide straight channel shown (stamped by a RI Professional Engineer or Surveyor). Based on budget and FEMA guidance the work outlined in Line 3, which consists of stones that were on the bottom in the area but were moved around as a result of Hurricane Sandy and into the channel / navigation area and are now a significant hazard to navigation and personal safety, may not be awarded as part of this contract.

**Line 2**

Rock removal from channel area from Station 0+00 through Station 3+50 will include the removal of rocks that can be safely lifted from between the entrance breakwaters and placed in the "rock storage area" as shown on the plans west of the west breakwater. It is acceptable to lower a rock to -4 feet MLLW if it can't be safely removed from the area. The State and the contractor shall agree based on the surveys which rocks are to be removed and which are to be lowered. Any sand that is excavated in the process of lowering a rock shall be placed in the sand disposal area east of the east breakwater. This area was significantly impacted by Hurricane Sandy in the wall collapse locations shown and has resulted in stones moved in the navigation area causing significant hazards to navigation and personal safety. Stones east and west of the 60' channel may need to be removed in order to safely remove stones in the channel. This removal will be agreed upon after the survey and paid at the unit rate for this area.

**BID SPECIFICATIONS 7461247-ADDENDUM 2  
CHARLESTOWN BREACHWAY ROCK REMOVAL  
SCOPE OF WORK**

**Line 3**

Rock removal from the channel area from Station 3+50 through Station 4+75 will include the removal of rocks that can be safely lifted and placed in the "rock storage area" as shown on the plans west of the west breakwater. It is acceptable to lower a rock to below -4' MLLW if it can't be safely removed from the area. The State and the contactor shall agree based on the surveys which rocks are to be removed and which are to be lowered. Any sand that is excavated in the process of lowering a rock shall be placed in the sand disposal area east of the east breakwater. The rocks in this area were moved by Hurricane Sandy from areas that presented limited navigational impacts to locations that are now within the channel area and are causing significant hazards to navigation and personal safety.
