Bid 7461330 Specifications

To supply all necessary equipment and supplies to replace 120 feet of existing underground clay sewer pipe. The existing depth of the clay sewer main is approximately 5 to 6 feet. The size of the existing clay pipe is undetermined, but is approximately to be 10 or 12 Inch.

The sewer main must remain active though out the replacement project.

This will require one or two sewer suction trucks to extract sewer water at the manhole up steam from the job site. The sewerage extracted can be emptied into an existing sewer manhole down stream from the work site close by, sewer manhole # 5.

The sewer pipe replacement will run from an existing active sewer manhole # 4 to the down steam sewer manhole # 5. The pipe that will be used to replace the clay pipe will be either 10 inch or 12 inch SDR 35 gasketed pipe.

The sewer manhole # 4 that the project begins at will need to be cleaned out with a Vactor truck. This manhole will also need a new trough system installed at the bottom of the manhole due to its condition. This can be achieved by using either the 10" or 12" SDR 35 pipe, cutting it in half, sliding it into the manhole and make the proper connection to the existing sewer pipe entering the manhole. This is to insure, that work not completed at the end of the normal work day, the sewer main can be put back into service and work resumed the following working day. The new SDR 35 half pipe trough in the manhole will need concrete to fill in any gaps between it and the bottom of the manhole to keep it water tight. Also, if the new sewer pipe, SDR 35, installation is not completed at end of the normal work day, it must be connected to the existing clay sewer pipe so that the sewer stays active. All new sewer pipe connections at the existing sewer manholes will be sealed water tight.

Sewer manhole #-5 is located in an asphalt lot and will require saw cutting approximately 7 feet wide by 30 feet long. This is to install the new 10 inch or 12 in SDR 35 sewer pipe from sewer manhole #4 to sewer manhole # 5. Remove and dispose existing asphalt and replace with new asphalt.
