Testing

- A. Chemical composition testing shall follow AASHTO M-143 Appendix A1 – Rapid Method of Test for Sodium Chloride, except for controversy, in which case testing shall conform to the 11th edition of the Official Methods of Analysis of the Association of Official Analytical Chemists or comparable absorption analysis.
- B. Particle size analysis shall consist of using sieves with square openings mounted on substantial frames or interlocked in a manner as to insure loss of material during sieving. Woven wire cloth shall conform to AASHTO M-92. Gradation analysis shall be made on oven dried material and the sample shall weigh, after drying, or at least 500.0 grams. In no case shall the fraction retained on any sieve, at the completion of the sieving operation, weigh more than four grams per square inch of sieving surface (this is 200 grams for 8 inch diameter round sieves). If sieving is completed by hand - shaking lateral and vertical motion with occasional jarring action so as to keep the material moving continuously over the surfaces of the sieves for a time of not less than three minutes. When mechanical shaking is provided the time limit shall be a maximum of five minutes. The balance of the scale shall be sensitive to within 0.2% of the weight of the sample to be tested.
- C. Moisture content shall be determined by a method of weighing before and after oven. Oven shall be at 110 degrees +/- 5 degrees C (230 degrees +/- 9 degrees F) for a minimum of four hours.
- D. Each successful bidder shall indicate the chemical nature of the anti-caking material and shall furnish a laboratory procedure for the method for determining the uniform presence of their respective anti-caking conditioner.

Penalty and Price Adjustment

- A. For each percent by which moisture content exceeds maximums specified, the contractor will be penalized by reducing the price of the sodium chloride by two percent (2.0%).
- B. For each percent by which gradation exceed the maximums allowed, the contractor will be penalized by reducing the price of the sodium chloride by one percent (1.0%).
- C. Penalties, if any, will be assessed against the accumulated and mixed samples of each of the daily deliveries to each location. Said sample shall be representative of the gradation and moisture content of all sodium chloride delivered that day.
