**Vendor Questions and Responses.**  
**RFP 7550549**

**Question:** It is stated that the vessel cannot contain air within the collar / fendering system. We have developed a patented new hybrid collar system which contains 80% foam within a removable and replaceable air bladder. This air bladder is protected via an outer urethane coated membrane. Would this type of system be considered for this proposal? If not, we can construct a 100% polyethylene foam collar but the hybrid system is new and not many people know about it yet.

**Response:** We would require that a 100% polyethylene foam collar be constructed.

**Question:** To meet the speed requirements while still meeting the deadrise, beam, length and outfit package will triple engines be considered?

**Response:** Yes

**Question:** When you state the vessel shall have a deep V, will 22 degree's meet that requirement?

**Response:** 22 degrees is acceptable if measured at the transom

**Question: Electrical System:** Does the customer want one or two search lights?

Minimum (4) LED law enforcement lights, located to provide full 360 coverage and 2NM range. Final location and lights to be reviewed and approved by DEM Police representative.

- Minimum (1) ACR RLC100-12D remote controlled search light with dual controls, one each on port and starboard consoles

- Minimum (1) ACR RLC100-12D remote controlled search light with dual controls, one each on port and starboard consoles

- All wiring shall be USCG approved cable

**Response:** One searchlight only. This was a typo duplication.

**Question: CABIN AND DECK:** Spec says "storage / crew area in forward bow area", what do they want in this area?

**Response:** Underneath the forward deck area would be storage crew/boat gear

End.
