STATE OF RHODE ISLAND
DIVISION OF PURCHASES
BID NO. 7598751
STATEWIDE ON-CALL SPRAY POTHOLE PATCHING SERVICES (MPA #529)

MINIMUM SPECIFICATIONS FOR ON-CALL SPRAY POTHOLE PATCHING SERVICES

SCOPE OF WORK:

The State of Rhode Island is seeking the services of a vendor to supply agencies with a truck-mounted spray injection pothole patcher, complete with operator and materials on a daily on-call basis. The spray injection pothole patch truck specified herein shall be provided with a skilled operator and all required materials as specified to perform spray injection pothole patching on a daily on-call basis where directed by agency. The vendor shall verify they can provide a minimum of two (2) up to a maximum of five (5) spray injection trucks and operators on an as-needed basis within the time period specified below. The state estimates the annual usage will be approximately 3,000 total pothole patching hours. This number is an estimate based upon usage history and not a guarantee of annual hours under this contract.

The actual duration of the on-call period will be determined by the state and will be based on the demand required to support the agency needs. The state anticipates needing the pothole patch trucks for the entire year (12 months) weather permitting. Bidders made aware that RIDOT typically shuts down the pothole patch truck operations at a minimum through the holidays in December and January. It is important to note that winter storm operations take priority from November 15 through April 15 annually and the patch trucks will be shut down as determined by RIDOT during this time period.

The prospective vendors shall provide a cut-sheet and specification of the truck and materials proposed to be used as part of their bid package. The state reserves the right to accept or reject equipment proposed based upon their review of the information provided. If an alternate model and/or method are proposed, the alternate model and/or method shall meet all the specifications herein to be considered. The state may require a demonstration of any alternative/different model truck prior to considering award to that company.

The vendor shall supply a complete system with skilled operators and the proper materials that are required to perform spray injection pothole patching as specified herein. All trucks shall be in good working order prior to arrival at the designated daily work assignment. RIDOT will not pay for down time of the vehicle or its operator while the vehicle is down.

All services shall be provided at an hourly rate per truck based on an 8-hour workday Monday through Friday. This time may be adjusted as required when approved in writing by RIDOT or requesting agency. The hourly rate shall be all inclusive for a turnkey pothole patching operation; including, but not limited to, the spray injection truck, vehicle operator, aggregate and asphalt emulsion. Aggregate and asphalt emulsion quantities as well as GPS data for all potholes filled shall be provided to RIDOT on a daily basis for each truck in operation.

Regular 8-hour workdays shall be Monday through Friday between 7:00 AM and 5:00 PM. Some work may be required to be performed during overnight periods where it may be determined to be more efficient, due to traffic and/or safety concerns. Overnight hours will be work performed after 5:00 PM and before 7:00 AM.

To ensure the availability of the asphalt emulsion products, the vendor shall have its own dedicated heated delivery tankers. To maintain the integrity and quality of the asphalt emulsion product that is used in the application, the vendor shall have dedicated heated and metered delivery tankers so that there is a reduced potential of cross contamination of the emulsion product that can adversely affect the spray pothole patching application.

The vendor shall have a minimum of THREE (3) YEARS of verifiable experience providing the services equal to the services that are being requested by RIDOT and shall provide a minimum of THREE (3) references as part of their bid package. The vendor is responsible to perform all maintenance on the equipment to ensure 8 hours of productivity per day. RIDOT reserves the right to terminate use of any vendor, operator, or truck that fails to produce 8 hours of productive work consistently every day.

The vendor shall respond to the call for services within 24 hours of receiving the notice to proceed from the State of Rhode Island. Note: The vendor shall be required to supply services at multiple locations using more than one piece of equipment in any workday as requested by RIDOT. The vendor shall be capable of providing a minimum of two (2) patch trucks up to a maximum of five (5) with operators on any one day for the duration required by RIDOT.

RIDOT will provide locations of where pothole repairs are to be performed from the designated Agency Manager. RIDOT maintains approximately 3300 lane miles of highways statewide, and the On-Call service may be directed to any of these roadways statewide. Traffic control will be provided by RIDOT on all interstates, freeways and limited access highways and shall include a truck-mounted attenuator for each crew each day and a police detail where deemed necessary by RIDOT. The vendor shall provide their own traffic control on all other roadways and this cost shall be included in the hourly rate of the patch truck.

All pothole repairs made by the vendor shall be performed in accordance with road maintenance industry standards, and all pothole repairs shall be warranted against failure for a period of not less than 90 days. Any pothole repair that is identified to the vendor that has failed shall be repaired by the vendor at no additional cost to the state.

At the end of each workday, the vendor shall provide RIDOT with a computerized listing of the locations where the truck has completed repairs that shall contain (at a minimum): Time, Date and Location of the repair event. A geo-referenced location log shall also be provided so RIDOT can enter the repairs into their GIS.

The vendor shall perform quality control inspections to ensure the pothole patching program achieves the highest level of productivity and success attainable. The vendor shall provide RIDOT with a weekly progress report of all RIDOT activity.

The contract terms and pricing shall be valid for two (2) years, with a one (1) year option (pricing included) to extend the contract which may be exercised by the state at the conclusion of the year two work.

BID EVALUTION AND PRICING:

All bidders shall complete the *Minimum Bid Evaluation Criteria Data Form* which is included in this RFQ. Bids will be evaluated based upon daily production rates, hourly rate costs, estimated service life of the patch, warranty period provided and the bidder's demonstrated experience. The winning bidder shall provide RIDOT with the best performance value based upon these criteria.

Bidders shall provide invoices for the work completed statewide in the prior two (2) week period. These invoices shall include, but not be limited to, the tonnage of patch placed, labor and equipment utilized daily throughout the billing period, and the number of hours in operation for each day through the billing period.

MATERIALS AND EQUIPMENT STORAGE AND STAGING:

The vendor shall secure and retain a suitable facility within Rhode Island large enough to store all the contracted patching equipment, ancillary support equipment, and a minimum of 50 tons of washed, clean, dry aggregate materials inside and kept warm and dry, especially during cold weather periods for the duration of this contract. This facility shall be heated to a minimum of 55 degrees Fahrenheit at all times during the months of October through April. The cost of this facility shall be included as overhead and ancillary in the vendor's pricing for this contract. RIDOT shall not pay the vendor separately for the cost of this facility.

EQUIPMENT:

The spray injection patch truck system shall be kept clean and in good working order. The cleaning process shall be capable of being performed from within the cab of the patch truck and shall not incorporate the discharge of any materials in an unsafe or non-environmentally clean manner. The spray patch truck shall be equipped with automated controls so that the operator is not required to exit the vehicle to perform any application of the repair or cleaning process. The vendor shall be responsible for proper disposal of all waste materials resulting from the cleaning process. The patch truck shall have the ability to perform linear patching while moving in a forward direction. The patch truck shall be equipped with a directional arrow board-mounted on the rear of the vehicle capable of providing a visual warning to pedestrians and approaching vehicles. All patch trucks shall have a georeferencing system on board capable of marking and tracking all patches done by the vehicles and provided to RIDOT in a format compatible with RIDOT's GIS mapping system.

MAINTENANCE AND SUPPORT OF SPRAY INJECTION EQUIPMENT:

The vendor shall be responsible for the full performance capability of all equipment provided to perform the required services under this contract. The vendor shall perform all predictive and preventative maintenance on equipment when required at a time that does not interfere with the contract activity or impact the productivity of the operations. In addition, if a mechanical issue cannot be corrected *within 24 hours*, the vendor shall have the ability to provide a replacement vehicle to continue the pothole patching services. The state shall not be invoiced for non-productive vehicle time.

Any spray injection pothole patch truck submitted not conforming to these specifications will be rejected, and it will be the responsibility of the vendor to conform to the requirements unless deviations have been specifically cited by the vendor and acceptance made on the basis of the exceptions in writing by RIDOT.

Each complete spray injection pothole patch truck unit shall conform to the requirements of the federal motor vehicle code.

SPRAY PATCHING APPLICATION:

The truck-mounted asphalt spray patcher shall be designed and constructed to repair larger cracks, potholes and broad areas. The spray injection pothole patch truck shall be completely controlled by one person from the driver's position of the cab. This vehicle, including all materials, shall be capable of patching successfully at temperatures as low as 0 degrees Fahrenheit. Operational features of the equipment provided shall be designed to use air volume to complete steps 1-4 listed below:

1. **Clean** – dust shall be removed from the pothole by high velocity air flow, creating a clean, hard surface.
2. **Tack** – a mixture of air and asphalt emulsion (see ** below) spray shall be applied as a binder for the pothole repair.
3. **Fill** – with a compact mixture of air, asphalt and aggregate that shall be applied at a high velocity to completely fill the pothole.
4. **Dry Coat** – a mixture of air and aggregate or a recycled rubber material shall be applied to permit traffic on the repaired area without tracking. This is the final step on roadways.

**Asphalt emulsion shall be suitable for the weather conditions when being applied, even if ambient temperatures are below 0 degrees Fahrenheit.

AGGREGATE HEATING AND VIBRATING SYSTEMS:

The vendor shall provide an aggregate heating and an aggregate vibrating system to be used with the above equipment. The aggregate heating system shall allow the rock to remain free flowing in cold weather and freezing conditions.

The aggregate vibrator system shall allow for the dislodging of bridged material if the material becomes lodged in the aggregate hopper. These systems are necessary during winter or in adverse weather conditions to ensure a consistent distribution of aggregate is achieved.

AGGREGATE SYSTEM:

The aggregate storage tank shall hold a minimum of 5 cubic yards of aggregate. The tank shall be equipped with a cover to prevent aggregate from bouncing out while being transported and to seal the tank so it can be pressurized to equalize the pressure developed in the aggregate supply hose.

ASPHALT EMULSION FEED AND FLUSH SYSTEM:

The asphalt air system shall be pressurized to deliver asphalt to completely cover aggregate at full feed capacity. The delivery system shall be capable of maintaining 60 psi throughout the petroleum resistant delivery hose. The emulsion shall be drawn from the bottom part of the tank to maintain good circulation over the heat tube.

ENVIRONMENTAL CONTROLS:

The spray injection patch truck shall be equipped with a system designed to clear the emulsion lines of residue and incorporate a method to circulate a bio-degradable cleaning material through the asphalt delivery circuit for cleaning purposes. This process shall be capable of being performed from within the cab of the vehicle by the operator without having to exit the cab.

ACCOUNTABILITY REPORTING:

The spray injection pothole patch truck shall incorporate the necessary equipment to provide reports of vehicle positioning and tracking that can provide the following minimum data: Date, Time, Location with the POTHOLE FILL stamp in the report and the unit shall have the ability to receive and send text messages to the program manager for communication purposes.

QUALITY CONTROL EVALUATIONS:

The vendor shall perform a Quality Control Evaluation of each operator's performance during the patching activity to ensure the work is being applied in accordance with industry standards and that the expectations of RIDOT are being achieved.

ASPHALT EMULSION:

The materials supplied for the spray injection patch truck shall be compatible for the time of year when the activity is being performed.

Winter applications shall be considered when temperatures will remain below 50 degrees Fahrenheit.

The vendor is responsible for providing the proper material that provides the highest level of success during the conditions when the application is being applied. The vendor shall be capable of successfully performing spray patching when the ambient temperatures are below ZERO degrees Fahrenheit.

AGGREGATE:

Aggregate sizes for spray injection shall be AASHTO or ASTM size No. 9 (4.75 to 1.18 mm - No. 4 to No. 16) with no more than 3% passing the 75 urn (No. 200) sieve. Crushed aggregate material recommended for spray injection. Using an asphalt emulsion content of approximately 7% by weight of aggregate works best for warm weather conditions, while spray injection placed in winter conditions perform well at an asphalt emulsion content of about 5% by weight of aggregate.

Priority of Terms and Conditions

The terms and conditions in these Instructions to Bidders *supersede* any and all inconsistent or conflicting terms and conditions in any other provision of any other document in this solicitation or in the bid proposal and govern this solicitation, the bid proposal, and any contract awarded pursuant to this solicitation.
