BID INSTRUCTIONS/SPECIFICATIONS

SNOW PLOWING, SANDING & REMOVAL
ATTACHMENT "B"

BID #7323098

VIII PLOWING REFERS TO THE CLEARING OF A LOCATION BY MOVEMENT AND/OR PILING OF SNOW AT THAT SAME LOCATION.

REMOVAL OF SNOW FROM PREMISES REFERS TO THE LOADING OF PLOWED SNOW ONTO TRUCKS AND DUMPING AT ANOTHER LOCATION. ANY VENDOR BIDDING REMOVAL ITEMS MUST HAVE ALL EQUIPMENT AND PERSONNEL NECESSARY AND MUST BE SURE TO LIST THAT EQUIPMENT ON THE "EQUIPMENT INFORMATION" SHEET ALONG WITH THE EQUIPMENT THEY USE FOR PLOWING.

FAILURE TO FOLLOW THESE INSTRUCTIONS MAY RESULT IN DISQUALIFICATION OF BID PRIOR TO AWARD OR NON-PAYMENT AND POSSIBLE CANCELLATION OF CONTRACT AFTER AWARD.

BID #7323098

SNOW PLOWING - SANDING & REMOVAL
AWARD BASIS

A "weighted" system will be used to determine the lowest overall bid response for each location.

Basically, it will involve assigning a numerical factor based on historical data to each price line (except hourly rates for snow removal) at each location.

The bid price for a particular depth, multiplied by the "weighted" factor for that depth, when added to the other "weighted" depth price lines for that location, will yield the overall lowest response.

- See next page for an example -

All bidders must keep in mind that responses must be proportionate to the work required. That is to say, prices must reflect proportionately with respect to a particular snow depth as part of the total number of varying snow depths and their frequency. The Purchasing Agent reserves the right to review and reject unbalanced bids.

KENT COUNTY PARKING GARAGE - SNOW PLOWING AND ICE CONTROL

SNOW IS NORMALLY PLOWED DOWNHILL USING A VEHICLE WITH AN AXLE WEIGHT OF 3,000 LBS. MAXIMUM. THE SNOWPLOW BLADE SHOULD BE MODIFIED WITH HEAVY RUBBER CUTTING EDGE ATTACHED TO THE BOTTOM, OR

with shoes designed to keep the steel blade from contacting the concrete floor surface. Keep the steel blade one-half inch above the floor surface to avoid damage to concrete, expansion joint systems, joint sealants and traffic topping systems. Plowing should be done away from joints, not across them.

Snow is normally plowed to specific locations within the facility where a "Bobcat" or industrial snow blower can be used to throw the snow over the side. Take care with a "Bobcat" or snow blower to avoid damage to concrete panels, connection hardware and expansion joints. Remove snow from temporary drop points. Off-peak snow removal operation may be required to deal with heavy snowfalls effectively and safely.

Snow can also be quickly brushed away with a rotary broom mounted in front of a utility vehicle. Clearing snow with a rotary broom is typically efficient only for light snowfalls. Steel or other metallic bristles on rotary brooms can damage traffic topping and must not be used under any circumstances.

Studded snow tires and tire chains cause damage to concrete and traffic topping and should be prohibited.

The slope of the floors is designed to drain surface water as quickly as possible. Certain areas, primarily entrance/exit lanes and the top level, are particularly vulnerable to icing when water drains from sun-warmed surfaces into shaded areas. Be aware of these areas and control icing as it occurs.

Ice buildup can be controlled by using hot sand or a mixture of sand and salt. Do not apply deicing chemicals containing chloride directly to the concrete unless extreme ice conditions exist. Small amounts of salt (3 to 6 percent by weight) added to sand can be very effective at increasing traction and preventing skid problems. Apply the sand/salt mixture only as needed. Drain systems should be protected against runoff-related sand accumulation during ice control operations. Use temporary burlap or straw filters to prevent drain clogging and possible damage to drain systems.

KENT COUNTY PARKING GARAGE – SNOW PLOWING AND ICE CONTROL

Most common chemical deicers can have major chemical and physical effects on reinforced concrete systems. Several deicers are listed below with a general description of the common effects on materials typically found in and around a parking facility. Although a deicer may affect one type of material (such as metals and steel reinforcing, or steel connections), and have little effect on other materials (such as concrete), the effect on the single material may

progressively affect the entire reinforced concrete system. When such deicers, in solution with water, reach steel via cracks, serious deterioration of structural components can result. The following summarizes the effects of common deicing agents.

Common Deicing Agents:

Sodium Chloride (halite, table salt, or rock salt) has little chemical effect on concrete, but will damage lawns and shrubs. It promotes metal corrosion. **Do Not Use.**

Calcium Chloride, a major active component of many proprietary deicers, has little chemical effect on concrete, lawns, and shrubs, but it causes corrosion of metal. It is particularly hazardous to prestressing steel. **Do Not Use.**

Calcium Magnesium Acetate (CMA) is available as "ICE-B-GONE @ DEICER", manufactured by Chevron. CMA helps break up the bond between the ice and the driving surface. It acts similarly to salt, but is slower-acting – typically 10 to 15 minutes. CMA has no known adverse effects on concrete or embedded reinforcement. CMA will not damage lawns or shrubs.

Ammonium Nitrate or Ammonium Sulfate is beneficial to most vegetation, but may lead to complete destruction of concrete because of direct chemical attack on concrete reinforcement.

Prilled Urea does not damage concrete, lawns, shrubs or metal. Prilled urea does not behave the same as common road salts. Our reports are as follows:

- 1) Attracts moisture or stays "mushy" longer than salted areas.
- 2) Takes longer (than salt) to penetrate ice
- 3) Will work best at breaking up ice with solar action. Tends to have little effect after dark or at temperatures below 24° F.
- 4) Use urea to break up ice and then shovel.

ATTACHMENT G

KENT COUNTY PARKING GARAGE – SNOW PLOWING AND ICE CONTROL

Ethylene Glycol, or a solution of ethylene glycol and urea, is used by many airports for ice control on runways and planes. While effective to -40° F and non-damaging, it is considerably more expensive than urea.

Sand, or a mixture of sand and salt, may be used to eliminate or reduce the use of deicers.

All deicing compounds, including road salt, do not work in extremely cold temperatures. Sand can be broadcast over icy surfaces to improve traction when deicing agents are ineffective. The use of sand may require additional sweeping and cleaning maintenance.

Minimize the use of deicing chemicals during the first two years of concrete curing. Properly designed, air-entrained and cured concrete is required to provide a durable concrete structural system, but concrete curing is an ongoing process. Recommended deicing measures, in order of decreasing preference, are:

- 1) Clean, plow, scrape off ice and snow. Use no deicing agents.
- 2) Calcium Magnesium Acetate (CMA).
 - 3) Prilled Urea (granular, chemically coated with a derivative of formaldehyde).
 - 4) Use sand to increase traction. When washing down, place burlap or stry filters over floor drains to keep sand out of drainage systems.
 - 5) Use mixture of sand and Calcium or Sodium Chloride
 - 6) Calcium Chloride
 - 7) Sodium Chloride
 - 8) Never use Ammonium Nitrate or Ammonium Sulfate

TERMS AND CONDITIONS FOR THIS BID

MULTI YEAR AWARD

CONTINUATION OF THE CONTRACT BEYOND THE INITIAL FISCAL YEAR WILL BE AT THE DISCRETION OF THE STATE. TERMINATION MAY BE EFFECTED BY THE STATE BASED UPON DETERMINING FACTORS SUCH AS UNSATISFACTORY PERFORMANCE OR THE DETERMINATION BY THE STATE TO DISCONTINUE THE GOODS/SERVICES, OR TO REVISE THE SCOPE AND NEED FOR THE TYPE OF GOODS/SERVICES; ALSO MANAGEMENT OWNER DETERMINATIONS THAT MAY PRECLUDE THE NEED FOR GOODS/SERVICES.

PURCHASE AGREEMENT BID

BIDDING (a) A single price shall be quoted for each item against which a proposal is submitted. This price will be the maximum in effect during the agreement period. Any price decline at the manufacturer's level shall be reflected in a reduction of the agreement price to the State. (b) Quantities, if any, are estimated only. The agreement shall cover the actual quantities ordered during the period. Deliveries will be billed at the single, firm, awarded unit price quoted regardless of the quantities ordered. (c) Bid price is net F.O.B. destination and shall include inside delivery at no extra cost. (d) Bids for single items and/or a small percentage of total items listed, may, at the State's sole option, be rejected as being non-responsive to the intent of this request. **ORDERING** (a) The User Agency(s) will submit individual orders for the various items and various quantities as may be required during the agreement period. (b) Exception - Regardless of any agreement resulting from this bid, the State reserves the right to solicit prices separately for any extra large requirements for delivery to specific destinations.

QUARTERLY REPORTS

REPORTS - The Vendor agrees to provide the State with quarterly reports describing activity against this Price Agreement. If this is a Master Price Agreement, such reports shall include usage by municipalities, quasi-public agencies, schools, etc. All reports shall contain the following data: (1) Billing volume in dollars and (2) quantity shipped for each line item in the price agreement. When there are no line items in the price agreement, vendor shall report volume by catalog order numbers, with a brief description of each order number. Reports must be submitted to the RI Division of Purchases to the attention BUYER named in this notice, identifying the Agreement number and the Reporting Period. Quarterly reports shall be due 45 calendar days after the end of each quarter. Failure to submit required reports shall be considered a breach of the contractor's obligations and may be considered, at the discretion of the State Purchasing Agent, sufficient cause for the termination of the agreement and other outstanding agreements and orders, and possible suspension from participation in additional State procurements.

MPA BID AWARD (STATEWIDE APPLICABILITY)

STATEWIDE APPLICABILITY - Political Subdivisions (cities, towns, schools, quasi-public agencies), as authorized by law, may participate in this Agreement. All ordering and billing shall be between the vendor and the political subdivision (only).
