SPECIFICATION FOR SOLAR SALT FOR REMOVAL OF ICE AND SNOW

Chemical Composition

The sodium chloride shall conform to the following requirements as to chemical composition:

Total chlorides expressed as NaCl minimum % 95.0

Physical Requirements

A The gradation when tested by means of laboratory sieves shall conform to the following requirements for particle size without any variation:

<u>Sieve Size</u>	<u>% Passing by Weight</u>
5/8"	100.0%
7/16"	95.0% – 100.0%
No. 4	75.0%
No. 8	40.0%
No. 30	10.0%

B. The moisture content of the sodium chloride delivered shall not exceed 3.0%.

C. In order to prevent caking while in storage following delivery, all bulk salt shall be uniformly treated with an anti-caking conditioner (e.g. Anticake, Storite, or equal) prior to delivery. The conditioner shall be introduced uniformly throughout the sodium chloride at a rate equivalent to two pounds conditioner per one ton of sodium chloride. The use of a colored conditioned is desired.

Condition

The sodium chloride shall arrive at the purchaser's delivery point in a free flowing and useable condition.

Sampling

A Each sample submitted for testing shall consist of a minimum of three increments selected at random from the material. Each increment shall be at least one pound in weight and not include the top inch of stored material. Every attempt shall be made to insure a composition sample representative of the pile. Samples for chemical composition, gradation, water content and anti-caking shall be taken at the supplier's stockpile. Samples for moisture content, gradation and anti-caking may also be obtained at the time of delivery to the purchaser's delivery destination.

- B. The purchaser or their representative shall be provided free entry and access at the supplier's storage areas for sampling. It is anticipated that determination for initial compliance will be made from samples obtained from the supplier's storage areas. Shipments to the purchaser's points of delivery may be randomly sampled for moisture content and gradation control. If in doubt, complete analysis may be made on these samples.

Testing

- A. Chemical composition testing shall follow AASHTO M-143 Appendix A1 – Rapid Method of Test for Sodium Chloride, except for controversy, in which case testing shall conform to the 11th edition of the Official Methods of Analysis of the Association of Official Analytical Chemists or comparable absorption analysis.
- B. Particle size analysis shall consist of using sieves with square openings mounted on substantial frames or interlocked in a manner as to insure loss of material during sieving. Woven wire cloth shall conform to AASHTO M-92. Gradation analysis shall be made on oven dried material and the sample shall weigh, after drying, or at least 500.0 grams. In no case shall the fraction retained on any sieve, at the completion of the sieving operation, weigh more than four grams per square inch of sieving surface (this is 200 grams for 8 inch diameter round sieves). If sieving is completed by hand - shaking lateral and vertical motion with occasional jarring action so as to keep the material moving continuously over the surfaces of the sieves for a time of not less than three minutes. When mechanical shaking is provided the time limit shall be a maximum of five minutes. The balance of the scale shall be sensitive to within 0.2% of the weight of the sample to be tested.
- C. Moisture content shall be determined by a method of weighing before and after oven. Oven shall be at 110 degrees +/- 5 degrees C (230 degrees +/- 9 degrees F) for a minimum of four hours.
- D. Each successful bidder shall indicate the chemical nature of the anti-caking material and shall furnish a laboratory procedure for the method for determining the uniform presence of their respective anti-caking conditioner.

Penalty and Price Adjustment

- A. For each percent by which moisture content exceeds maximums specified, the contractor will be penalized by reducing the price of the sodium chloride by two percent (2.0%).
- B. For each percent by which gradation exceed the maximums allowed, the contractor will be penalized by reducing the price of the sodium chloride by one percent (1.0%).
- C. Penalties, if any, will be assessed against the accumulated and mixed samples of each of the daily deliveries to each location. Said sample shall be representative of the gradation and moisture content of all sodium chloride delivered that day.
